All Around the World

Key Vocabula	ry	
co-ordinates	A set of numbers and/or letters that show you a specific position on a map.	w
hemisphere	A half of the earth, usually divided by the equator into the northern and	Longit
	southern hemisphere.	Latitud
observatory	A place for observing and studying	These l
	natural events on Earth or in space.	Longitu
polar	The area around the North or South Pole.	These l
precipitation	Water particles that reach the ground including rain, hail and snow.	These l world

W

northern hemisphere – equator – southern hemisphere –

ude and Latitude

Latitude lines run around the earth east to west.

These lines are the same distance apart from each other.

ngitude lines run over the top of the earth north to south. These lines are not equally distant from each other.

These lines are used to give the specific location of anywhere in the world using **co-ordinates**.

Time Zones

- The Prime Meridian (PM) line divides the earth into the eastern and western hemisphere.
- It passes though the Royal **Observatory** in Greenwich, England.
- All time zones start here Greenwich Mean Time (GMT).
- There are 24 different time zones one for each hour in the day.
- From GMT to the east = +1 hour for every time zone.
- From GMT to the west = -1 hour for every time zone.
- The International Date Line is on the opposite side of the world from the PM. When it is noon at the Prime Meridian, it is midnight along the International Date Line. This is where midnight occurs first across the globe.
